

GET MORE OF THE POTENTIAL YOU PLANT.

PUSH THE BOUNDARIES. START WITH THE BASICS.

While we search for new technology to help us boost yields, we can't forget about the basics – nutrient and N management, fungicide application, tillage practices and residue management. These are key factors in yield improvement and we have to think about them differently if we want to maximize yields.

The tools from 360 Yield Center® will help change the way you manage nutrients, nitrogen (n) and plant health for better performing crops and better on-farm profits.

PRODUCTS

- 1** 360 SOILSCAN™ - Know how much nitrogen is left in your soil by accurately testing nitrogen availability and soil pH right in your field.
- 2** 360 Y-DROP® - Apply late-season nitrogen - even up to tassel - right where the plant needs it - at the base of the corn plant.
- 3** 360 Y-DROP® Sidedress - Upgrade your coulter system to 360 Y-DROP and get the flexibility to push your nitrogen application well into V6.
- 4** 360 UNDERCOVER® - Target your fungicide, insecticide and nutrient application where it's needed most - under the crop canopy.
- 5** 360 YIELD SAVER™ - Reduce header loss by 80% by closing the gaps in traditional deck plates and gathering chains.
- 6** 360 CHAINROLL™ - Chop and crimp stocks, making residue more available to microbial breakdown for better soil health and nutrient availability.
- 7** 360 BULLET™ - Lift and fracture the complete soil profile for improved root penetration.
- 8** 360 EQUI-FLOW™ - Take a new approach to NH₃ delivery for better row-to-row accuracy, improved sealing and a wider application window.
