

500 BUSHELS PER ACRE.

⊕ That's the potential
of modern seed corn.

UNTIL YOU PLANT.

⊕ And the potential starts to fade.

UNTIL NATURE TAKES ITS CUT.

⊕ By putting yield-robbing stress on your crops.

360YIELDCENTER.COM

GET MORE OF THE POTENTIAL YOU PLANTED.

Modern seed corn has the potential for 500 bushels per acre. Chances are, you're leaving a lot of that in the field, because everything from the weather to nitrogen leeching is putting stress on your crops. 360 Yield Center gives you more control over the factors that are stealing your yield.

SENSE ⊕

360 SOILSCANSM helps you sense the signals your farm is sending. It provides you with real-time nitrate and soil data — in the field. So you have a more complete picture of what is affecting your crops.

DECIDE ⊕

360 COMMANDERSM provides you with the most comprehensive analysis of your farm, economic and weather data. Giving you insights and recommendations for nitrogen application, planting rates and irrigation. To help you decide what actions are necessary to improve your yield.

APPLY ⊕

360 Y-DROPSM and 360 UNDERCOVERSM give you the ability to apply nitrogen, pesticides, herbicides and more — to feed and protect your crops. When and where you need it.

With 360 Yield Center, you have the power to sense, decide and apply — so at harvest, you leave nothing in the field.
