

UPDATE

360 COMMANDER Satisfaction Guarantee

What a year it has been. With the massive rain events and cooler than normal temperatures for much of the Corn Belt, many of us are being challenged to think about nitrogen differently. It is clear we need to know how much N is available for our crop.

You recognize the benefit of tools that optimize populations and nitrogen, and we appreciate your use of 360 COMMANDER™ this season.

Because of rain-related challenges, this year was great for testing the assumptions and data built into crop-modeling algorithms. We were very pleased with the way 360 COMMANDER modeled the loss of nitrogen. But, we certainly needed to address issues and adjust software to ensure the system generated recommendations we trusted. Our agronomy and product support teams also provided a lot of hands-on support to ensure prescriptions were right. As a result, we realized that modeling and algorithms aren't as plug-and-play and user-friendly as they should be.

We have high expectations for our products. That's why, if you were not satisfied with 360 COMMANDER – no matter the reason – we will give you your money back. We know most of our customers were very satisfied, but if you were not, just [return the form linked here](#) and we will return your payment. You can still access and use 360 COMMANDER through harvest and we will keep you updated on changes we implement to provide a tool with even more reliable nitrogen information.

Measure for Better N Decisions

One of the important lessons from this season: 360 SOILSCAN™ gets N availability right. It provides farmers with a complete picture of what is happening in the field. Getting real-time, in-field nitrate-nitrogen readings at the time of N application allows for better, fact-based N rate decisions. 360 SOILSCAN allows you to measure, not just model, and we want you to have the opportunity to utilize this technology next season for more complete nitrogen management decisions.

Whether you request a refund of your 360 COMMANDER purchase or not, we would like to provide you 360 SOILSCAN at a discount. Just purchase a 360 SOILSCAN from your [360 Yield Center Dealer](#) and [fill out this form](#) to receive a rebate.

Join Us at Proving Grounds to See What's Next

Next week at our field day – Proving Grounds – we will talk more about crop modeling and showcase how 360 SOILSCAN, and its new features, will be the go-to tool for nitrogen management. [Register today](#) for this free one-day event on Aug. 11, 12 or 13 in Tremont, Ill.

Thank you for your use of 360 COMMANDER this season. Your feedback and experiences have helped us adjust and develop the very best tools for enhanced nitrogen management.
