

360 DRAG CHAIN

Q DO I NEED TO SPECIFY IF I WANT THE EXTENSION BRACKET?

No. We know that often growers will change closing wheel types during the season. So we provide the base bracket and the extension bracket in each 360 DRAG CHAIN kit.

Q ARE THERE SITUATIONS WHERE I SHOULD NOT USE A CHAIN?

In our experience, a drag chain can be used in most every condition. The only time we have seen the chain be detrimental is when it catches on a spike wheel. Our bracket prevents this. The chain, in no-till or conventional till, helps level the seed trench and ensure soil fills the seed trench.

Q WHAT IF I CAN'T BOLT INTO THE CLOSING WHEEL HUB?

There are some types of closing wheels that will not allow the use of the center bolt mounting system. In these cases, a bracket that mounts to the closing wheel frame is recommended.
