

**Q CAN I USE ANY UTV?**

To date, we have tested and support only these UTV models:

- John Deere 835
- John Deere 865
- John Deere 825
- John Deere 855

Q IS THE UTV INCLUDED IN THE PRICE?

No.

Q HOW MANY GALLONS IN THE TANK?

300.

Q WHAT HAPPENS IF IT BECOMES DISCONNECTED?

There are check valves on both sides of the connection, so spillage is limited.

Q DO I HAVE TO HAVE A CAB ON MY UTV?

No. Because we provide two receiving connections, operators can usually choose an upwind end of the planter to avoid riding in dust.

Q WILL THIS DAMAGE OR STRESS MY UTV?

The system includes a tandem axle to support the added weight from the tank and fertilizer. With the addition of this axle, the weight and loads from 360 SPRINT are within the specs of the supported UTVs.

Q DOES THE PLANTER PULL THE 360 SPRINT WHILE FILLING?

The operator continues to power and drive the UTV. While the connection is able to pull the UTV, for safety, control and to prevent the planter from listing to one side.
